An Eligible Supplier to the EDC Companies

SIZES ARE NOMINAL. CHECK EXAMPLES TO DETERMINE SUITABILITY FOR YOUR PROJECT.

*Bullnose, baseboard, detail tile and all other trim profiles are made to order when accompanied with a tile or brick order.

**Pool coping can be discounted when accompanied with a brick or tile order.

Our cured floor tiles have a strength of about 3500 psi; our brick products are about 2500. Also available: moldings and trim, lintels, thresholds, sills, corbels, window and door pilasters, quoins, counter tops and architectural ornament, fountains, hardscape, and large pots made to order.

All of the preceding concrete products can be made in your choice of colors and textures, but there may be an additional charge for custom blended colors. Please inquire. Blue items are special order, not always available, and require an extra charge for the coloring.

Tile ordered for export off-island or tile that are to be stored must be pre-sealed before shipment or storage. This charge is \$1.25 per square foot for exterior sealers, and \$1.00 for interior acrylic sealers. Brick products can be shipped unsealed.

Payment terms: Orders must be accompanied by a payment of 50%, or an incremental payment of \$5,000 in larger orders; full payment is expected before orders leave our yard. Very large quantity orders may be further discounted depending on the items needed.

Orders are not palletized for pickup unless specified. Crating charges vary per product. Crates can be delivered by crane truck.

Notes about Taylor Products

Please do not pressure clean or acid wash any of our concrete products.

This may cause irreparable damage that may not immediately be apparent. Cleaning with soap, water and bleach will do the job. Interior tile can be most easily maintained with a Mop N Glow type cleaner; exterior tile, after sealing, can be hosed clean with your garden hose. Direct applications of bleach will remove mildew or stains. Exterior siloxane sealer must be renewed once a year, or when water on the surface obviously darkens the tile.

The 1/2" thick wall tile may be used to solve elevation problems on a good, reinforced concrete slab. This thickness cannot span any cracks, which would 'telegraph' through and also crack the grout. We recommend installation by professional tile setters.

The 8" tile are reproductions of tile found in California at the turn of the last century (Mission tile), and used throughout the islands in the form of machine made concrete tile from about the 1940's. These are flat-sided tile and are meant to be fitted together with a very small grout line, about 1/8".

The 2" thick tile can be laid on a dry mix of sand and cement, either inside a building or as an exterior patio or walkway. The bed must contain at least 20% cement and should be a minimum of 1" thick on top of a well packed base.

Driveway treatments are also available, please inquire.

These products are available in a smooth satin finish, a fine textured stone finish, or a travertine (like coral stone) texture. All can be colored to match or compliment paint, stone, or counter top materials. Samples made available upon request.

You can see our products in issues of "Architectural Digest," "House and Garden," and "Antiques."
